

# Imaginify -AI SaaS App

[Visit the live app](#)

## Introduction

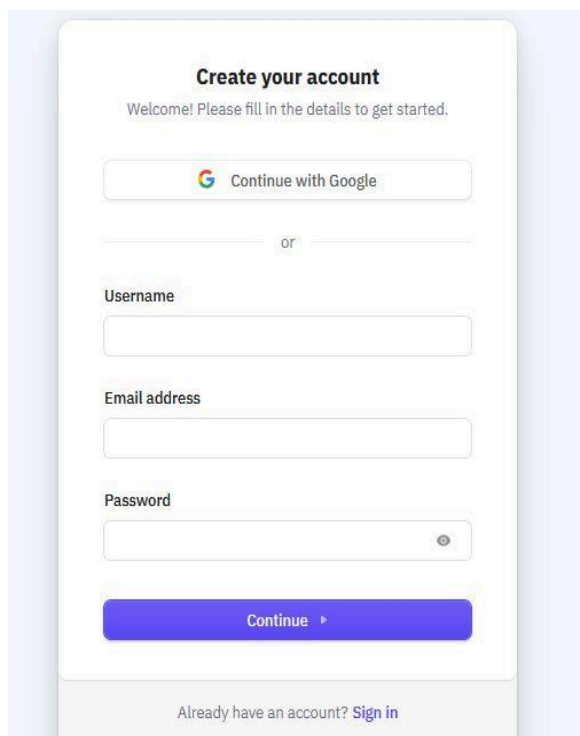

The imaginify is a web application that provides AI-based services to users. The services include image restoration, background removal, object removal, generative fill etc which are further explained. This app demonstrates a robust setup for building scalable and maintainable web applications.

## Technologies Used

- Next.js: React framework for server-side rendering and static site generation.
- Clerk: Authentication and user management service.
- Tailwind CSS: Utility-first CSS framework for styling.
- TypeScript: Typed superset of JavaScript.
- Vercel: Cloud platform for deploying web apps.

Interfaces:

## HomePage:

**Image Restore:** This feature is to enhance the quality of the image.

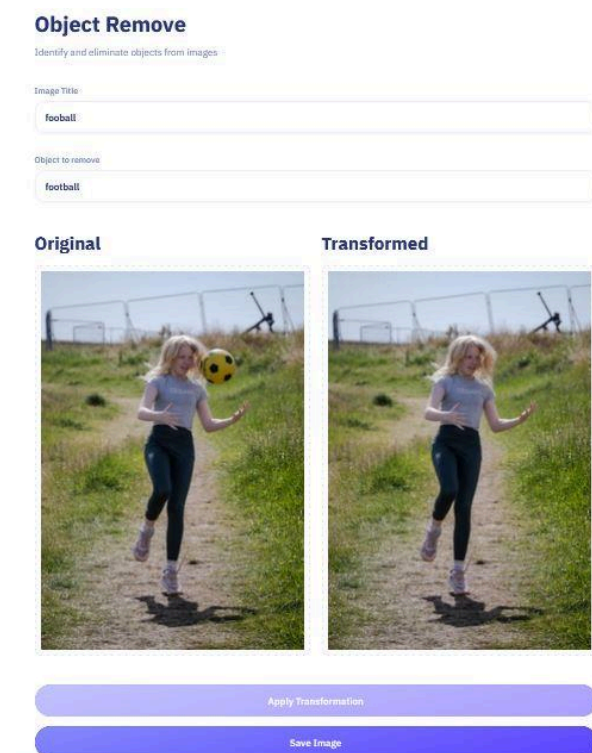

**Generative Fill** : If you want to increase the size of photo with smooth filling.

## Object Remove:

If you want to remove a particular thing from your photo , you just need to type the thing and this feature will remove that from image.

## Object Recolor :

If you want to change the color of a part then this feature allows you to do that.

Here I have changed the color of t shirt. To do that I had to type T-shirt and then the color that i want it to change.

### Object Recolor

Identify and recolor objects from the image

Image Title

man

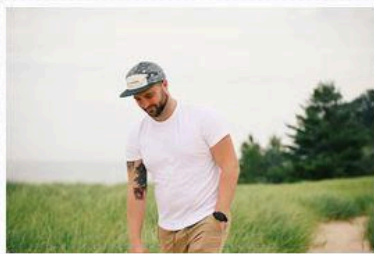

Object to recolor

t-shirt

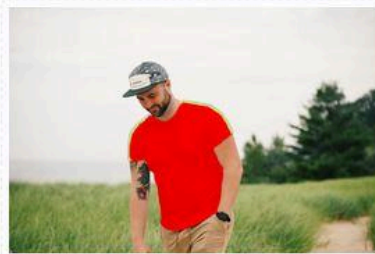

Replacement Color

red
